SELECTED PROJECTS

Financial tools suite

Problem: Readers need practical ways to inspect Nigerian financial decisions and figures. Built: A collection of free calculators, including insolvency analysis, take-home pay, remittance costs and bank capital checks. Stack: HTML, CSS, JavaScript Links: /tools.html

Corporate Insolvency Detector

Problem: Negative shareholders' funds and working-capital risks can be hard to spot from headline figures. Built: An interactive checker that evaluates balance-sheet inputs and surfaces solvency and working-capital signals. Stack: HTML, CSS, JavaScript Links: /insolvency-detector.html

Bank Health Checker

Problem: Readers need to compare disclosed bank capital with the relevant recapitalization tier target. Built: A browser-based checker for comparing a capital figure against a selected CBN licensing tier. Stack: HTML, CSS, JavaScript Links: /bank-health-checker.html

Odiete.com.ng publishing platform

Problem: The journal needed durable, crawlable article pages and discoverable interactive tools without a CMS. Built: A hand-built publishing site with generated article pages, structured data, RSS, sitemap and IndexNow support. Stack: HTML, JavaScript, Node.js, JSON-LD, Vercel Links: /

Cisco Networking Academy classes platform

Problem: Learners need a clear path from exploring courses to choosing a class and applying. Built: A course catalogue, course-finder quiz and application flow backed by Neon. Stack: HTML, CSS, JavaScript, Node.js, Neon Postgres, Vercel Links: /classes

Telecom revenue trend analysis

Problem: Make multi-year telecom revenue trends easier to inspect. Built: Analysed five years of revenue trends and visualised the findings. Stack: Python, Pandas, Matplotlib
